<b>Preface</b>	<b>i</b>
<b>List of Contributors</b>	<b>v</b>
<b>I Image Reconstruction</b>	<b>1</b>
<b>1 Diffusion Filters and Wavelets: What Can They Learn from Each Other?</b>	<b>3</b>
J. Weickert, G. Steidl, P. Mrázek, M. Welk, and T. Brox	
1.1 Introduction . . . . .	3
1.2 Basic Methods . . . . .	4
1.2.1 Wavelet Shrinkage . . . . .	4
1.2.2 Nonlinear Diffusion Filtering . . . . .	5
1.3 Relations for Space-Discrete Diffusion . . . . .	6
1.3.1 Equivalence for Two-Pixel Signals . . . . .	6
1.3.2 A Wavelet-Inspired Scheme for TV Diffusion of Signals . . . . .	7
1.3.3 Generalisations to Images . . . . .	8
1.4 Relations for Fully Discrete Diffusion . . . . .	9
1.4.1 Diffusion-Inspired Shrinkage Functions . . . . .	9
1.4.2 Wavelet Shrinkage with Improved Rotation Invariance .	10
1.4.3 Diffusion-Inspired Wavelet Shrinkage of Colour Images . . . . .	13
1.5 Wavelets with Higher Vanishing Moments . . . . .	13
1.6 Summary . . . . .	16
<b>2 Total Variation Image Restoration: Overview and Recent Develop- ments</b>	<b>17</b>
T. Chan, S. Esedoglu, F. Park and A. Yip	
2.1 Introduction . . . . .	17
2.2 Properties and Extensions . . . . .	19
2.2.1 BV Space and Basic Properties . . . . .	19
2.2.2 Multi-channel TV . . . . .	20

2.2.3	Scale . . . . .	20
2.3	Caveats . . . . .	21
2.4	Variants . . . . .	22
2.4.1	Iterated Refinement . . . . .	22
2.4.2	$L^1$ Fitting . . . . .	23
2.4.3	Anisotropic TV . . . . .	24
2.4.4	$H^{1,p}$ Regularization and Inf Convolution . . . . .	25
2.5	Further Applications to Image Reconstruction . . . . .	26
2.5.1	Deconvolution . . . . .	26
2.5.2	Inpainting . . . . .	27
2.5.3	Texture and Multiscale Decompositions . . . . .	28
2.6	Numerical Methods . . . . .	29
2.6.1	Artificial Time Marching and Fixed Point Iteration . . . . .	29
2.6.2	Duality-based Methods . . . . .	30
<b>3</b>	<b>PDE-Based Image and Surface Inpainting</b>	<b>33</b>
	M. Bertalmío, V. Caselles, G. Haro, and G. Sapiro	
3.1	Introduction . . . . .	33
3.2	Inpainting by Propagation of Information . . . . .	36
3.2.1	Image Inpainting . . . . .	36
3.2.2	Navier-Stokes Inpainting . . . . .	40
3.3	Variational Models for Filling-In . . . . .	42
3.3.1	Elastica-based Reconstruction of Level Lines . . . . .	43
3.3.2	Joint Interpolation of Vector Fields and Gray Levels . . . . .	45
3.3.3	A Variant and Mathematical Results . . . . .	48
3.3.4	Experimental Results . . . . .	50
3.4	Surface Reconstruction: The Laplace and the Absolute Minimizing Lipschitz Extension Interpolation . . . . .	52
3.4.1	Experimental Results . . . . .	54
3.5	Dealing with texture . . . . .	55
3.5.1	Texture Synthesis by Non-Parametric Sampling . . . . .	56
3.5.2	Inpainting with Image Decomposition . . . . .	56
3.5.3	Exemplar-based Inpainting . . . . .	58
3.6	Other Approaches . . . . .	58
3.6.1	Other PDE-based Models . . . . .	58
3.6.2	Miscellaneous . . . . .	59
3.7	Concluding Remarks . . . . .	60
3.8	Appendix . . . . .	60
3.9	Acknowledgments . . . . .	61
<b>II</b>	<b>Boundary Extraction, Segmentation and Grouping</b>	<b>63</b>
<b>4</b>	<b>Levelings: Theory and Practice</b>	<b>65</b>

F. Meyer		
4.1	Introduction . . . . .	65
4.2	Binary connected operators . . . . .	66
4.3	Flat grey-tone connected operators . . . . .	67
	4.3.1 Level by level construction . . . . .	67
	4.3.2 A morphological characterization . . . . .	68
4.4	Extended connected operators . . . . .	68
	4.4.1 Construction of floodings, razings, flattenings and levelings . . . . .	70
	4.4.1.1 Construction of floodings, razings, flattenings and levelings . . . . .	70
4.5	Levelings for image simplification . . . . .	71
	4.5.1 Varying $(\alpha, \beta)$ . . . . .	72
	4.5.2 Varying the marker function $h$ . . . . .	73
	4.5.3 Multiscale filtering . . . . .	74
	4.5.3.1 Construction of a hierarchy based on increasing floodings . . . . .	74
	4.5.3.2 Construction of a hierarchy based on quasi-flat zones . . . . .	76
4.6	Conclusion . . . . .	77
<b>5</b>	<b>Graph Cuts in Vision and Graphics: Theories and Applications</b>	<b>79</b>
Y. Boykov and O. Veksler		
5.1	Introduction . . . . .	79
5.2	Graph Cuts Basics . . . . .	80
	5.2.1 The Min-Cut and Max-Flow Problem . . . . .	81
	5.2.2 Algorithms for the Min-Cut and Max-Flow Problem . . . . .	81
5.3	Graph Cuts for Binary Optimization . . . . .	82
	5.3.1 Example: Binary Image Restoration . . . . .	82
	5.3.2 General Case of Binary Energy Minimization . . . . .	84
5.4	Graph Cuts as Hypersurfaces . . . . .	84
	5.4.1 Basic idea . . . . .	85
	5.4.2 Topological properties of graph cuts . . . . .	86
	5.4.3 Applications of graph cuts as hypersurfaces . . . . .	87
	5.4.4 Theories connecting graph-cuts and hypersurfaces in $R^n$ . . . . .	90
5.5	Generalizing Graph Cuts for Multi-Label Problems . . . . .	92
	5.5.1 Exact Multi-Label Optimization . . . . .	92
	5.5.2 Approximate Optimization . . . . .	94
	5.5.2.1 Local Minimum with Respect to Expansion and Swap Moves . . . . .	95
<b>6</b>	<b>Minimal Paths and Fast Marching Methods for Image Analysis</b>	<b>97</b>
L. Cohen		
6.1	Introduction . . . . .	97

6.2	Minimal Paths . . . . .	98
6.2.1	Geometrical optics . . . . .	98
6.2.2	Global Minimum for active contours . . . . .	99
6.2.3	Problem formulation . . . . .	99
6.2.4	Fast Marching Resolution . . . . .	100
6.2.5	2D Up-Wind Scheme . . . . .	102
6.2.6	Minimal Paths in 3D . . . . .	102
6.2.7	Simultaneous Front Propagation . . . . .	103
6.2.8	Simultaneous estimate of the path length . . . . .	104
6.3	Minimal paths from a set of endpoints $p_k$ . . . . .	105
6.4	Multiple minimal paths between regions $R_k$ . . . . .	107
6.5	Segmentation by Fast Marching . . . . .	108
6.6	Centered Minimal Paths and virtual endoscopy . . . . .	110
6.7	Conclusion . . . . .	111
<b>7</b>	<b>Integrating Shape and Texture in Deformable Models: from Hybrid Methods to Metamorphs</b>	<b>113</b>
	D. Metaxas, X. Huang and T. Chen	
7.1	Introduction . . . . .	113
7.2	Hybrid Segmentation Method . . . . .	116
7.2.1	Gibbs Models . . . . .	116
7.2.2	Deformable models in the Hybrid Framework . . . . .	118
7.2.3	Integration of Deformable Models and Gibbs Models . . . . .	120
7.3	Metamorphs: Deformable Shape and Texture Models . . . . .	121
7.3.1	The Metamorphs Model representations . . . . .	122
7.3.1.1	The Model's Shape Representation . . . . .	122
7.3.1.2	The Model's Deformations . . . . .	123
7.3.1.3	The Model's Texture . . . . .	123
7.3.2	The Metamorph Dynamics . . . . .	125
7.3.2.1	The Shape Data Terms . . . . .	125
7.3.2.2	The Intensity Data Terms . . . . .	126
7.3.3	Model Evolution . . . . .	127
7.3.4	The Model Fitting Algorithm and Experimental Results . . . . .	128
7.4	Conclusions . . . . .	129
<b>8</b>	<b>Variational Segmentation with Shape Priors</b>	<b>133</b>
	M. Bergtholdt, D. Cremers and C. Schnörr	
8.1	Introduction . . . . .	133
8.2	Shape Representation . . . . .	135
8.2.1	Parametric Contour Representations, Geometric Distances, and Invariance . . . . .	135
8.2.2	Matching Functionals and Psychophysical Distance Measures . . . . .	136
8.3	Learning Shape Statistics . . . . .	138

8.3.1	Shape Distances in Kernel Feature Space . . . . .	138
8.3.2	Structure-Preserving Embedding and Clustering . . . . .	139
8.4	Variational Segmentation and Shape Priors . . . . .	141
8.4.1	Variational Approach . . . . .	141
8.4.2	Kernel-based Invariant Shape Priors . . . . .	143
8.4.3	Shape Priors based on the Matching Distance . . . . .	143
8.4.4	Experimental Results . . . . .	144
8.5	Conclusion and Further Work . . . . .	144
<b>9</b>	<b>Curve Propagation, Level Set Methods and Grouping</b>	<b>147</b>
	N. Paragios	
9.1	Introduction . . . . .	147
9.2	On the Propagation of Curves . . . . .	148
9.2.1	Level Set Method . . . . .	149
9.2.2	Optimisation and Level Set Methods . . . . .	151
9.3	Data-driven Segmentation . . . . .	153
9.3.1	Boundary-based Segmentation . . . . .	153
9.3.2	Region-based Segmentation . . . . .	154
9.4	Prior Knowledge . . . . .	156
9.4.1	Average Models . . . . .	156
9.4.2	Prior Knowledge through Linear Shape Spaces . . . . .	159
9.5	Discussion . . . . .	161
<b>10</b>	<b>On a Stochastic Model of Geometric Snakes</b>	<b>163</b>
	A. Yezzi, D. Nain, G. Unal, O. Zeitouni and A. Tannenbaum	
10.1	Introduction . . . . .	163
10.2	Overview of Geodesic Snake Models . . . . .	165
10.3	Birth and Death Zero Range Particle Systems . . . . .	165
10.4	Poisson System Simulation . . . . .	166
10.5	Choosing a Random Event . . . . .	168
10.5.1	Using a List of Event Tokens . . . . .	168
10.5.2	Virtual Token List Method . . . . .	169
10.6	Similarity Invariant Flows . . . . .	170
10.6.1	Heat Equation and Similarity Flows . . . . .	171
10.6.2	Gradient Flow . . . . .	172
10.7	Stochastic Snakes . . . . .	173
10.7.1	Polygon representation and construction . . . . .	173
10.8	Experimental Results . . . . .	175
10.9	Conclusions and Future Research . . . . .	176
<b>III</b>	<b>Shape Modeling &amp; Registration</b>	<b>177</b>
<b>11</b>	<b>Invariant Processing and Occlusion Resistant Recognition of Planar Shapes</b>	<b>179</b>

A. Bruckstein	
11.1 Introduction . . . . .	179
11.2 Invariant Point Locations and Displacements . . . . .	180
11.3 Invariant Boundary Signatures for Recognition under Partial Occlusions . . . . .	184
11.4 Invariant Processing of Planar Shapes . . . . .	186
11.5 Concluding Remarks . . . . .	190
<b>12 Planar Shape Analysis and Its Applications in Image-Based Inferences</b>	<b>191</b>
A. Srivastava, S. Joshi, D. Kaziska and D. Wilson	
12.1 Introduction . . . . .	191
12.2 A Framework for Planar Shape Analysis . . . . .	193
12.3 Clustering of Shapes . . . . .	196
12.4 Interpolation of Shapes in Echocardiographic Image-Sequences . . . . .	198
12.5 Study of Human Silhouettes in Infrared Images . . . . .	202
12.5.1 TPCA Shape Model . . . . .	202
12.5.2 Bayesian Shape Estimation . . . . .	204
12.6 Summary & Discussion . . . . .	204
<b>13 Diffeomorphic Point Matching</b>	<b>207</b>
H. Guo, A. Rangarajan and S. Joshi	
13.1 Introduction . . . . .	207
13.2 Diffeomorphic Landmark Matching . . . . .	208
13.3 Diffeomorphic Point Shape Matching . . . . .	216
13.4 Discussion . . . . .	221
<b>14 Uncertainty-Driven, Point-Based Image Registration</b>	<b>223</b>
C. Stewart	
14.1 Introduction . . . . .	223
14.2 Objective Function, ICP and Normal Distances . . . . .	225
14.3 Parameter Estimates and Covariance Matrices . . . . .	228
14.4 Stable Sampling of ICP Constraints . . . . .	230
14.5 Dual-Bootstrap ICP . . . . .	232
14.6 Discussion and Conclusion . . . . .	236
<b>IV Motion Analysis, Optical Flow &amp; Tracking</b>	<b>239</b>
<b>15 Optical Flow Estimation</b>	<b>241</b>
D. Fleet and Y. Weiss	
15.1 Introduction . . . . .	241
15.2 Basic Gradient-Based Estimation . . . . .	242
15.3 Iterative Optical Flow Estimation . . . . .	245

15.4	Robust Motion Estimation . . . . .	248
15.5	Motion Models . . . . .	249
15.6	Global Smoothing . . . . .	251
15.7	Conservation Assumptions . . . . .	252
15.8	Probabilistic Formulations . . . . .	254
15.9	Layered Motion . . . . .	255
15.10	Conclusions . . . . .	258
<b>16</b>	<b>From Bayes to PDEs in Image Warping</b>	<b>261</b>
	M. Nielsen and B. Markussen	
16.1	Motivation and problem statement . . . . .	261
16.2	Admissible warps . . . . .	262
16.3	Bayesian formulation of warp estimation . . . . .	264
16.4	Likelihood: Matching criteria . . . . .	266
16.5	Prior: Smoothness criteria . . . . .	268
16.6	Warp time and computing time . . . . .	271
16.7	From fluid registration to diffeomorphic minimizers . . . . .	272
16.8	Discussion and open problems . . . . .	273
<b>17</b>	<b>Image Alignment and Stitching</b>	<b>275</b>
	R. Szeliski	
17.1	Introduction . . . . .	275
17.2	Motion models . . . . .	276
17.3	Direct and feature-based alignment . . . . .	279
	17.3.1 Direct methods . . . . .	279
	17.3.2 Feature-based registration . . . . .	281
	17.3.3 Direct vs. feature-based . . . . .	284
17.4	Global registration . . . . .	285
	17.4.1 Bundle adjustment . . . . .	285
	17.4.2 Parallax removal . . . . .	287
	17.4.3 Recognizing panoramas . . . . .	287
17.5	Choosing a compositing surface . . . . .	288
17.6	Seam selection and pixel blending . . . . .	289
17.7	Extensions and open issues . . . . .	293
<b>18</b>	<b>Visual Tracking: A Short Research Roadmap</b>	<b>295</b>
	A. Blake	
18.1	Introduction . . . . .	295
18.2	Simple appearance models . . . . .	296
	18.2.1 Simple patches . . . . .	296
	18.2.2 Blobs . . . . .	297
	18.2.3 Background maintenance . . . . .	297
18.3	Active contours . . . . .	298
	18.3.1 Snakes . . . . .	298
	18.3.2 Parametric structures . . . . .	299

18.3.3	Affine contours . . . . .	300
18.3.4	Nonrigidity . . . . .	302
18.3.5	Robust curve distances . . . . .	302
18.4	Spatio-temporal filtering . . . . .	303
18.4.1	Dynamical models . . . . .	303
18.4.2	Kalman filter for point features . . . . .	304
18.4.3	Kalman filter for contours . . . . .	305
18.4.4	Particle filter . . . . .	305
18.5	Further topics . . . . .	308
<b>19</b>	<b>Shape Gradient for Image and Video Segmentation</b>	<b>311</b>
	S. Jehan-Besson, A. Herbulot, M. Barlaud, G. Aubert	
19.1	Introduction . . . . .	311
19.2	Problem Statement . . . . .	312
19.3	From shape derivation tools towards region-based active contours models . . . . .	314
19.3.1	Shape derivation tools . . . . .	315
19.3.1.1	Introduction of transformations . . . . .	315
19.3.1.2	Relations between the derivatives . . . . .	315
19.3.2	Derivation of boundary-based terms . . . . .	316
19.3.3	Derivation of region-based terms . . . . .	317
19.3.3.1	Region-independent descriptors . . . . .	317
19.3.3.2	Region-dependent descriptors . . . . .	317
19.4	Segmentation using Statistical Region-dependent descriptors . . . . .	319
19.4.1	Examples of Descriptors based on parametric statistics . . . . .	321
19.4.1.1	Region-dependent descriptors using the mean . . . . .	321
19.4.1.2	Region-dependent descriptors based on the variance . . . . .	321
19.4.2	Descriptors based on non parametric statistics . . . . .	322
19.4.2.1	Region-dependent descriptors based on non parametric pdfs of image features . . . . .	322
19.4.2.2	Minimization of the distance between pdfs for tracking . . . . .	323
19.5	Discussion . . . . .	324
<b>20</b>	<b>Model-Based Human Motion Capture</b>	<b>327</b>
	I. Kakadiaris and C. Barrón	
20.1	Introduction . . . . .	327
20.2	Methods . . . . .	329
20.2.1	Human body model acquisition . . . . .	330
20.2.2	Model-based tracking . . . . .	333
20.3	Results . . . . .	336
20.4	Discussion . . . . .	340

<b>21 Modeling Dynamic Scenes: An Overview of Dynamic Textures</b>	<b>343</b>
G. Doretto and S. Soatto	
21.1 Introduction . . . . .	343
21.1.1 Related work . . . . .	345
21.2 Representation of dynamic textures . . . . .	346
21.3 Learning dynamic textures . . . . .	346
21.3.1 Closed-form solution . . . . .	348
21.4 Model validation . . . . .	349
21.5 Recognition . . . . .	351
21.5.1 Distances between dynamic texture models . . . . .	351
21.5.2 Performance of the nearest neighbor classifier . . . . .	352
21.6 Segmentation . . . . .	353
21.7 Discussion . . . . .	357
<b>V 3D from Images, Projective Geometry &amp; Stereo Reconstruction</b>	<b>359</b>
<b>22 Differential Geometry from the Frenet Point of View: Boundary Detection, Stereo, Texture and Color</b>	<b>361</b>
S. Zucker	
22.1 Introduction . . . . .	361
22.2 Introduction to Frenet-Serret . . . . .	363
22.3 Co-Circularity in $\mathbb{R}^2 \times S^1$ . . . . .	365
22.3.1 Multiple Orientations and Product Spaces . . . . .	366
22.4 Stereo: Inferring Frenet 3-Frames from 2-Frames . . . . .	367
22.5 Covariant Derivatives, Oriented Textures, and Color . . . . .	369
22.5.1 Hue Flows . . . . .	373
22.6 Discussion . . . . .	374
<b>23 Shape From Shading</b>	<b>377</b>
E. Prados and O. Faugeras	
23.1 Introduction . . . . .	377
23.2 Mathematical formulation of the SFS problem . . . . .	379
23.2.1 “Orthographic SFS” with a far light source . . . . .	379
23.2.2 “Perspective SFS” with a far light source . . . . .	380
23.2.3 “Perspective SFS” with a point light source at the optical center . . . . .	380
23.2.4 A generic Hamiltonian . . . . .	381
23.3 Mathematical study of the SFS problem . . . . .	381
23.3.1 Related work . . . . .	381
23.3.2 Nonuniqueness and characterization of a solution . . . . .	382
23.4 Numerical solutions by “Propagation and PDEs methods” . . . . .	384
23.4.1 Related work . . . . .	384

23.4.2	An example of provably convergent numerical method: Prados and Faugeras' method . . . . .	385
23.5	Examples of numerical results . . . . .	387
23.5.1	Document restoration using SFS . . . . .	387
23.5.2	Face reconstruction from SFS . . . . .	389
23.5.3	Potential applications to medical images . . . . .	389
23.6	Conclusion . . . . .	390
<b>24</b>	<b>3D from Image Sequences: Calibration, Motion and Shape Recovery</b>	<b>391</b>
	M. Pollefeys	
24.1	Introduction . . . . .	391
24.1.1	Notations and background . . . . .	392
24.2	Relating images . . . . .	394
24.2.1	Epipolar geometry computation . . . . .	394
24.3	Structure and motion recovery . . . . .	395
24.3.1	Initial structure and motion . . . . .	396
24.3.2	Updating the structure and motion . . . . .	397
24.3.3	Refining structure and motion . . . . .	398
24.3.4	Upgrading from projective to metric . . . . .	398
24.4	Dense surface estimation . . . . .	400
24.4.1	Rectification and stereo matching . . . . .	400
24.4.2	Multi-view linking . . . . .	401
24.5	3D surface reconstruction . . . . .	402
24.6	Conclusion . . . . .	404
<b>25</b>	<b>Multi-view Reconstruction of Static and Dynamic Scenes</b>	<b>407</b>
	M. Agrawal, A. Mittal and L. Davis	
25.1	Introduction . . . . .	407
25.2	Reconstruction of Static Scenes . . . . .	408
25.2.1	Visual Hull . . . . .	409
25.2.2	Voxel Coloring . . . . .	409
25.2.3	Space Carving . . . . .	411
25.2.4	Probabilistic Approaches . . . . .	413
25.2.5	Probabilistic Space Carving . . . . .	413
25.2.6	Roxels: Responsibility Weighted Voxels . . . . .	414
25.2.7	Probabilistic Surface Reconstruction . . . . .	414
25.2.8	Probabilistic Image-Based Stereo . . . . .	417
25.3	Reconstruction of Dynamic Scenes . . . . .	418
25.3.1	Visual Hull Algorithms . . . . .	418
25.3.2	Approximate 3D Localization of Targets for Surveillance . . . . .	418
25.4	Sensor Planning . . . . .	421
25.5	Conclusion . . . . .	423

<b>26 Graph Cut Algorithms for Binocular Stereo with Occlusions</b>	<b>425</b>
V. Kolmogorov and R. Zabih	
26.1 Traditional stereo methods . . . . .	425
26.1.1 Energy minimization via graph cuts . . . . .	427
26.2 Stereo with occlusions . . . . .	428
26.2.1 Notation . . . . .	430
26.3 Voxel labeling algorithm . . . . .	431
26.4 Pixel labeling algorithm . . . . .	432
26.5 Minimizing the energy . . . . .	433
26.6 Experimental results . . . . .	434
26.6.1 Implementational details . . . . .	434
26.6.2 Algorithm performance . . . . .	435
26.7 Conclusions . . . . .	436
<b>27 Modelling Non-Rigid Dynamic Scenes from Multi-View Image Sequences</b>	<b>441</b>
J.-P. Pons, R. Keriven and O. Faugeras	
27.1 Introduction . . . . .	441
27.2 Previous Work . . . . .	442
27.2.1 Multi-view complete stereovision . . . . .	442
27.2.2 Scene flow estimation . . . . .	444
27.2.3 Shape-motion integration . . . . .	445
27.3 The Prediction Error as a New Metric for Stereovision and Scene Flow Estimation . . . . .	445
27.3.1 Stereovision . . . . .	447
27.3.2 Scene flow . . . . .	448
27.3.3 Some similarity measures . . . . .	449
27.4 Experimental Results . . . . .	450
27.4.1 Stereovision . . . . .	451
27.4.2 Stereovision + scene flow . . . . .	452
27.5 Conclusion and Future Work . . . . .	453
<b>VI Applications: Medical Image Analysis</b>	<b>455</b>
<b>28 Interactive Graph-Based Segmentation Methods in Cardiovascular Imaging</b>	<b>457</b>
L. Grady, Y. Sun and J. Williams	
28.1 Introduction . . . . .	457
28.2 Characteristic Behaviors of the Algorithms . . . . .	458
28.3 Applications on CT Cardiovascular data . . . . .	461
28.3.1 Segmenting Individual Heart Chambers using Graph Cuts . . . . .	462
28.3.2 Multi-Resolution Banded Graph Cuts . . . . .	462
28.3.3 Empirical Results . . . . .	463

28.3.4	Random Walks for Simultaneous Chamber Segmentation . . . . .	464
28.3.5	The Random Walker Algorithm . . . . .	465
28.3.6	Numerical solution . . . . .	466
28.3.7	Empirical Results . . . . .	467
28.3.8	Isoperimetric algorithm . . . . .	468
28.3.9	Bone-Vessel Separation . . . . .	469
28.4	Conclusions . . . . .	471
<b>29</b>	<b>3D Active Shape and Appearance Models in Cardiac Image Analysis</b>	<b>473</b>
	B. Lelieveldt, A. Frangi, S. Mitchell, H. van Assen, S. Ordas, J. Reiber and M. Sonka	
29.1	Introduction . . . . .	473
29.1.1	Background . . . . .	474
29.1.2	Issues inherent to 3D extension . . . . .	476
29.2	Methods . . . . .	477
29.2.1	3D Point Distribution Models . . . . .	477
29.2.2	3D Active Shape Models . . . . .	478
29.2.3	3D and 4D Active Appearance Models . . . . .	481
29.2.3.1	2D + time Active Appearance Models . . . . .	481
29.2.3.2	3D Active Appearance Models: Modeling Volume Appearance . . . . .	482
29.2.3.3	3D Active Appearance Models: Matching . . . . .	483
29.2.3.4	Multi-view Active Appearance Models . . . . .	484
29.2.3.5	3D + time Active Appearance Models . . . . .	486
29.3	Discussion and Conclusion . . . . .	486
<b>30</b>	<b>Characterization of Diffusion Anisotropy in DWI</b>	<b>489</b>
	Y. Chen	
30.1	Introduction . . . . .	489
30.2	Estimation of PDF . . . . .	491
30.3	Estimation of ADC profiles . . . . .	495
30.4	Conclusion . . . . .	501
<b>31</b>	<b>Segmentation of Diffusion Tensor Images</b>	<b>505</b>
	Z. Wang and B. Vemuri	
31.1	Introduction . . . . .	505
31.2	K-means for DTI segmentation . . . . .	507
31.3	Boundary-based active contours for DTI segmentation . . . . .	507
31.4	Region-based active contour for DTI segmentation . . . . .	509
31.4.1	An information theoretic diffusion tensor “distance” . . . . .	509
31.4.2	The DTI Segmentation Model . . . . .	511
31.4.3	The Piecewise Constant Model for DTI Segmentation . . . . .	512
31.4.4	The Piecewise Smooth DTI Segmentation Model . . . . .	513

31.4.5	Experimental Results . . . . .	515
31.5	Conclusion . . . . .	516
<b>32</b>	<b>Variational Approaches to the Estimation, Regularization and Segmentation of Diffusion Tensor Images</b>	<b>519</b>
	R. Deriche, D. Tschumperlé, C. Lenglet and M. Rousson	
32.1	Introduction . . . . .	519
32.2	Estimation of Diffusion Tensor Images . . . . .	520
32.2.1	Data acquisition . . . . .	520
32.2.2	Linear estimation . . . . .	521
32.2.3	Variational estimation . . . . .	521
32.3	Regularization of Diffusion Tensor Images . . . . .	522
32.3.1	On some non-spectral methods and their limitations . . . . .	523
32.3.2	A fast isospectral method . . . . .	523
32.4	Segmentation of Diffusion Tensor Images . . . . .	524
32.4.1	Level-set and region-based surface evolution . . . . .	525
32.4.2	Multivariate Gaussian distributions as a linear space . . . . .	525
32.4.3	Information-theoretic statistics between distributions . . . . .	526
32.4.4	A Riemannian approach to DTI segmentation . . . . .	529
32.5	Conclusion . . . . .	532
<b>33</b>	<b>An Introduction to Statistical Methods of Medical Image Registration</b>	<b>533</b>
	L. Zöllei, J. Fisher and W. Wells	
33.1	Introduction . . . . .	533
33.2	The Similarity Measures . . . . .	534
33.2.1	Maximum Likelihood . . . . .	535
33.2.2	Approximate Maximum Likelihood . . . . .	537
33.2.3	Kullback-Leibler Divergence . . . . .	539
33.2.4	Mutual Information and Joint Entropy . . . . .	541
33.3	Conclusion . . . . .	543
